

Instructions to Run Codes for the MLT-04 lecture

To execute all codes smoothly on your local machine, please follow the instructions given below:

1. Download the *mlt04_environment_file.yml* from the downloadable files of the MLT-04 lecture available on the LMS.
2. Create a new virtual environment.
 - a. Open the Anaconda prompt and navigate to the path where you have downloaded the file mentioned in the above step. You can use the `cd <path>` command to navigate folders. Replace `<path>` with your actual path.
 - b. Execute the following commands to create a new environment:
 - i. **`conda env update --file mlt04_environment_file.yml`**
 - ii. **`conda install jupyter`**
3. Open Jupyter Notebook from the newly created virtual environment.
 - a. If the environment is not activated, activate it using the following command:
 - i. **`conda activate qi-nlp`**
 - ii. **`jupyter notebook`**
4. Navigate to the folder from the jupyter notebook homepage to open the MLT-04 notebook.
